Breakthroughs in Alzheimer's Research

7:00 – 8:00 PM

Tuesday, March 4, 2014

The Eileen and Paul Finkel Auditorium, CMC Breckenridge
107 Denison Placer Road, Breckenridge, Colorado

Exciting scientific progress is being made in discovering potential ways to predict, delay and treat Alzheimer's Disease. Concurrent with our joint scientific research conferences on Alzheimer's and Parkinson's Diseases, Keystone Symposia is hosting an evening event for the public with three esteemed Alzheimer's researchers:

David M. Holtzman, M.D. is the Andrew B. and Gretchen P. Jones Professor and Chairman of Neurology, Professor of Developmental Biology, Associate Director of the Alzheimer's Disease Research Center and a member of the Hope Center for Neurological Disorders at Washington University School of Medicine in St. Louis. He is involved with new Alzheimer's treatment trials plus finding biomarkers to identify those at risk. He has appeared on the Charlie Rose Brain Series on PBS.

Richard Mayeux, M.D., M.Sc. is the Gertrude H. Sergievsky Professor of Neurology, Psychiatry and Epidemiology at Columbia University as well as Chairman of the Department of Neurology and Neurologist-in-Chief at New York Presbyterian Hospital. Since 1989, he has led a multi-disciplinary, population-based, epidemiological investigation of Alzheimer's and related conditions, which has resulted in identification of risk factors including genetic predisposition among different ethnic groups.

John Q. Trojanowski, Ph.D. is Professor of Pathology and Laboratory Medicine at the University of Pennsylvania and Director of the NIA Alzheimer's Disease Center. He pursues research on Alzheimer's and Parkinson's disease, motor neuron disease, amyotrophic lateral sclerosis (ALS or Lou Gehrig's disease), frontotemporal degeneration and related disorders. He led an effort to prepare a 2009 PBS film on healthy brain aging and AD ("Alzheimer's Disease – Facing the Facts").

Brief presentations will be followed by Q&A.
No RSVP necessary.
